truSculpt®

FAQ

WHAT IS TRUSCULPT?

truSculpt is an innovative 15-minute, non-invasive, non-surgical, body sculpting treatment that effectively reduces stubborn fat in areas* that have been resistant to exercise and diet.

HOW DOES TRUSCULPT WORK?

truSculpt uses innovative Monopolar RF technology to selectively target fat cells to heat and destroy them. After receiving a 15-minute treatment, the damaged fat cells are slowly naturally broken down and eliminated from the treated area over a 12-week period. Patients see an average of 24% fat reduction per treatment area.[1,2]

HOW DOES IT FEEL?

truSculpt treatments are typically described as warm but tolerable.[3] During treatment, the temperature of your skin will rise but remain comfortable.[1] The heat may be adjusted for your comfort.[1]

IS THERE DOWNTIME?

truSculpt treatments are non-invasive, require no recovery time, and allow you to immediately return to normal activities after treatment. After treatment, the treated area may be warm and flushed for one hour.[1]

WHAT AREAS CAN GET TREATED?

Treatments can be done on the abdomen and flanks. Your provider will determine your custom truSculpt treatment and the areas that will help you achieve your desired results.

HOW MUCH DOES IT COST?

Treatment pricing can vary.
Visit https://yourtrubody.com/find-a-provider/ to find a provider near you for local pricing and options.

HOW MANY TREATMENTS ARE NEEDED?

Visible results are typically achieved with one truSculpt session.[3,4] Additional treatments may be required to achieve the personalized results you desire.

IS IT SAFE FOR ALL SKIN TYPES?

There are no skin type restrictions. truSculpt will improve the definition and contouring on all shapes, so almost anyone can benefit from a treatment.[1] During your consultation, your provider will discuss with you if you are a candidate based on goals, health and medical history.
